

ERIC SILVA DOS SANTOS

Software Engineer | Backend Developer | Node.js, TypeScript & Go

Salvador, BA, Brazil | Phone / WhatsApp: +55 (71) 99203-7328 | Email: ek.silva.santos@gmail.com
LinkedIn: linkedin.com/in/eric-ssantos | GitHub: github.com/ericNKS | Portfolio: https://ecsilva.com/en

PROFESSIONAL SUMMARY

High-impact Software Engineer and Backend Developer specializing in the Node.js (NestJS), TypeScript, and Go ecosystems. Proven track record in architecting high-scale, resilient systems, achieving 77% memory consumption reduction and 90% database query latency optimization in production environments. Strong background in Clean Architecture, Modular Monoliths, Microservices, and Event-Driven Architecture (EDA). Experienced in backend systems, APIs, and modern fullstack.

PROFESSIONAL EXPERIENCE

Politimax | Backend Developer Salvador, BA (Remote) | March 2024 - Present

- System Engineering: Developed and scaled microservices and modular monolith architectures, rigorously applying enterprise design patterns (SOLID, DRY) and Clean Architecture principles.
- Cloud Infrastructure Optimization: Achieved 77% memory consumption reduction in asynchronous microservices (Node.js, Express, MongoDB) handling intensive background tasks and cron jobs, enabling instance downgrades and substantial monthly cloud cost savings.
- Database Performance Tuning: Executed advanced query refactoring, index tuning, and table restructuring on MySQL, cutting CPU/RAM load and accelerating request response times by up to 90% in production.
- Internal Tooling & Automation: Engineered high-performance automation CLI tools in Go (Golang) to streamline internal workflows, significantly lowering task execution times.
- Legacy Modernization: Maintained and decoupled business logic within a legacy PHP (Zend Framework) monolith, ensuring architectural stability and continuous zero-downtime feature delivery.

FEATURED PROJECTS

MailGo | Go, Docker, RabbitMQ, Gin Gonic | github.com/ericNKS/MailGo

- High-throughput asynchronous email dispatch worker written in Go. Eliminates synchronous processing bottlenecks in large-scale web applications via message queues and resilient retry mechanisms.

LIFE FIT | React, Next.js, Tailwind CSS, GSAP, Lenis | github.com/ericNKS/life-fit

- Ultra-performant fitness brand web application focused on interactive motion, smooth scroll kinematics, and top-tier CWV.

Gerson Barber | Next.js, TypeScript, Tailwind CSS, WhatsApp Booking Integration

- Full-fledged on-demand appointment booking platform with automated WhatsApp scheduling, customer gallery, and tiers.

EDUCATION

Bachelor of Science in Computer Science | Universidade Jorge Amado (Unijorge) Expected Graduation: Dec 2027

TECHNICAL SKILLS

Primary Ecosystem: Node.js, TypeScript, JavaScript, NestJS, Express.js, Go (Golang)
Frontend & UI: React, Next.js, Tailwind CSS, GSAP, Responsive Design, State Management
Architecture & Design: Clean Architecture, Microservices, Event-Driven Architecture (EDA), SOLID, DRY, REST APIs
Databases & Messaging: MySQL (Advanced Query Optimization), PostgreSQL, MongoDB, Redis, RabbitMQ
DevOps & Tooling: Docker, Git, Linux, Postman, CI/CD pipelines, Performance Profiling
Secondary Back-end: PHP (Zend Framework, Laravel, Symfony)
Languages: Portuguese (Native), English (Intermediate / Professional Working Proficiency)
